PROFESSIONAL SUMMARY

Detail-oriented and proactive M.Sc. Cybersecurity student (SRH University Berlin, Oct 2025–Sep 2027) with 7 months professional experience in cybersecurity risk assessment, threat detection, and security operations at a managed security services provider. Hands-on expertise across SOC operations (Wazuh, Microsoft Sentinel, KQL), GRC and compliance automation (NIS2, GDPR Art. 32–34, ISO 27001, NIST CSF), access control and IAM governance (AWS IAM, least-privilege enforcement), and vulnerability management (Nessus, OpenVAS, CVSS). Built a portfolio of self-directed security projects spanning SOAR automation, phishing triage, cloud IAM compliance, and SIEM detection engineering. Proficient in Python, MS Office (Word, Excel, PowerPoint), and AI-assisted development tools (GitHub Copilot, Claude). Internship fulfils mandatory M.Sc. requirement (Pflichtpraktikum) — no sponsorship required. Available immediately across Germany and EU.

TECHNICAL SKILLS

SIEM & Detection Engineering: Microsoft Sentinel (KQL), Wazuh 4.x, Splunk (self-study), Sigma rules, Sysmon, Windows Event ID analysis, custom detection rule authoring

GRC & Risk Management: Application risk assessments, third-party risk assessments, enterprise risk analysis, risk registers, control validation, cybersecurity risk standards, NIST CSF, ISO 27001 (awareness), NIS2 Art. 21–23, GDPR Art. 32–34, CIS Benchmarks, OWASP Top 10

Access Control & IAM: AWS IAM, least-privilege enforcement, access validation, privileged access control, identity governance, access request review, TOMs, data processing agreements (DPAs), AWS Config compliance rules

Incident Response & Triage: Alert investigation, severity classification, IOC extraction, escalation workflows, incident documentation, TheHive case management, MITRE ATT&CK, Cyber Kill Chain

Vulnerability Management: Nessus, OpenVAS, CVSS scoring, remediation lifecycle, patch validation, compliance reporting

Network & Traffic Analysis: Wireshark, Zeek, Nmap, tcpdump, TCP/IP, DNS, HTTP/S, packet-level analysis

Security Automation & Development: Python, PowerShell, Bash, KQL, Docker, Terraform, GitHub Actions, boto3, FastAPI, React — log parsing, SOAR pipelines, CI/CD security gating

AI & Development Tools: GitHub Copilot, Claude (AI-assisted development, architecture decisions, boilerplate acceleration)

Reporting & Documentation: Risk report authoring, dashboards (Streamlit), KPI reporting, MS Office (Word, Excel, PowerPoint), structured findings reports, incident documentation

Platforms & Operating Systems: AWS, Azure, Kali Linux, Ubuntu 22.04, Windows 10/Server; VirusTotal, AbuseIPDB, MISP, OpenCTI, Nessus, OpenVAS, YARA

CERTIFICATIONS & TRAINING

- TryHackMe SOC Analyst Level 1 — Completed
- TryHackMe AI Security — Completed
- CompTIA Security+ — Exam scheduled July 2026
- Microsoft SC-200: Security Operations Analyst — In progress
- Blue Team Level 1 (BTL1) — In progress

EXPERIENCE

Cybersecurity Intern — ITKART IT Services (MSSP, 200+ clients) — Pune, India

Feb 2024 – Aug 2024

- Supported application risk assessments by gathering information from system owners, documenting cybersecurity and data protection risks, and validating remediation controls — covering discovery, CVSS scoring, remediation planning, and patch retest across multiple concurrent client environments.
- Assisted in third-party risk assessments by reviewing supplier security configurations, validating evidence, and identifying cybersecurity risks using Nessus and OpenVAS; updated risk registers and drove follow-ups through to patch validation.
- Triage and investigated security alerts using SIEM tooling — determined severity, documented findings, and escalated confirmed incidents to senior analysts following defined IR workflows.
- Produced structured risk findings reports and remediation documentation for both engineering teams and non-technical management stakeholders — adapting technical detail to audience in a fast-paced, multi-client environment.

PROJECTS

SOC Automation Engine — AI-Assisted L1 Triage & Incident Response

Jan 2025 – Present

Python · Wazuh · OpenSearch · Streamlit · Docker · GitHub Copilot · VirusTotal API · AbuseIPDB

- Built a 9-module SOC automation engine connecting to a live Wazuh SIEM — fetches alerts in real time, classifies threats against 11 MITRE ATT&CK techniques using a 14-rule detection engine, enriches suspicious IPs via VirusTotal v3 and AbuseIPDB, and auto-generates TLP:AMBER PDF incident reports with NIS2 Art. 23 / GDPR Art. 33–34 SLA tracking.
- Reduced false positive alert volume by 85–93% on real lab data (100 raw alerts → 2–7 confirmed incidents per cycle); 0.079ms average classification latency (benchmarked); validated with 94 unit tests. Developed using GitHub Copilot and Claude for architecture and boilerplate acceleration.

Repo: github.com/Strixhack/soc-automation-engine

AWS IAM Compliance Automation — TOMs, Access Control & Risk Register

Jan 2026 – Mar 2026

Terraform · Python · AWS IAM · AWS Config · GitHub Actions · boto3 · pytest

- Designed automated control validation across 6 AWS Config compliance rules and 12 IAM security policies implementing Technical and Organisational Measures (TOMs) for data processing agreements — enforcing EU data residency, MFA, key rotation, and least-privilege; mapped to GDPR Art. 32, NIS2 Art. 21, ISO 27001 A.9, and CIS AWS Benchmark.
- Automated risk register updates via Python/boto3 Lambda flagging compliance drift; CI/CD pipeline gates all changes with tfsec, Checkov, and pytest (19 test cases); produced auditable compliance reports mapping controls to regulatory requirements.

Repo: github.com/strixhack/aws-iam-security-lab

Phishing Incident Response Platform — Full-Stack SOC Triage Automation

Oct 2024 – Mar 2025

Python · FastAPI · React · Docker · YARA · VirusTotal · MISP · TheHive · NIS2

- Built a full-stack phishing triage pipeline: .eml parsing, parallel IOC enrichment (VirusTotal / AbuseIPDB / MISP), YARA scanning, MITRE ATT&CK auto-mapping, and NIS2 Art. 23-compliant case management with automated 24h/72h notification timers — reducing manual triage from ~30 minutes to under 60 seconds per email on honeypot test data.
- React analyst dashboard with L1/L2/CISO escalation queue, TheHive auto-case creation (TLP:AMBER), campaign detection, and immutable audit log.

Repo: github.com/Strixhack/phishing-triage-pipeline

Enterprise SIEM Deployment — KQL Detection Rule Engineering

Mar 2026

Microsoft Sentinel · KQL · Microsoft Defender XDR · Azure

- Provisioned Microsoft Sentinel on Azure; authored 8+ KQL detection rules covering lateral movement, brute-force bursts, LOLBin abuse, and suspicious PowerShell — each documented with MITRE technique mapping, risk classification, tuning rationale, and FP exclusion logic.

Threat Detection Lab — Real Attack Simulation & Incident Investigation

Oct 2024 – Present

Wazuh · Sysmon · VirtualBox · Kali Linux · MITRE ATT&CK · TheHive

- Deployed Wazuh SIEM on Ubuntu 22.04 with Sysmon-instrumented Windows 10; simulated 10 MITRE ATT&CK-mapped attack techniques (Nmap T1046, Hydra T1110, EternalBlue T1210, Mimikatz T1003, persistence T1053); reduced false positives ~40% through iterative rule tuning.
- Authored 10+ MITRE ATT&CK-mapped incident reports in TheHive (IOC extraction, attack timeline, severity classification, escalation decision, containment steps); published Wazuh active-response runbooks to GitHub.

EDUCATION

M.Sc. Cybersecurity — SRH University Berlin

Oct 2025 – Sep 2027 (enrolled, expected)

- Relevant coursework: Risk Management, Network Security, Digital Forensics, Security Architecture, Incident Response, Cryptography.

B.Sc. Computer Science — Savitribai Phule Pune University

Aug 2021 – May 2024

- CGPA 7.95/10 (equivalent to 2:1 or above) · Final-year project: network security and secure systems design.

ADDITIONAL INFORMATION

Languages: English (C1, Fluent) · German (A2/B1, actively learning) · Hindi & Marathi (Native)

Practice Platforms: TryHackMe (SOC L1 completed), LetsDefend (Active), CTF competitions

Work Eligibility: German student residence permit. Internship fulfils mandatory M.Sc. requirement (Pflichtpraktikum) — no sponsorship required. Eligible for 18-month Job Seeker Visa upon graduation (Sep 2027). Open to relocation across Germany and EU.

Availability: Immediate start. Werkstudent (15–20 hrs/week) or full-time Pflichtpraktikum (40 hrs/week).

Interests: Detection engineering, GRC automation, IAM governance, AI-assisted security tooling, open-source Blue Team tooling
